

## Classic Lie & Loft Measuring Gauge

The iconic gauge that defined today's lie and loft measuring standard 25 years ago, is still relied on by OEM's and casting houses alike for measuring specifications on woods, irons, hybrids and putters as they move through production.

This minimalist no fuss Spec gauge is cast from Meehanite steel and machined to very fine tolerances. The bed and sliders are hand lapped and all surfaces are matted to achieve very tight geometrical tolerances for perpendicularity, circularity and parallelism.

The Green gauge measures lie, loft, face angle, face progression and hosel offset. Off the shelf accessories can be added to this gauge to extend its functionality as desired. This gauge is now by far the most cost effective solution for controlling irons and putters.

### Key Features:

- 10" Radius lie angle divider
  - 90°~55 Degree Lie angle scale
  - Geared micro-metric lie angle control
  - Precision guided Shaft slider with 4" travel
  - 5" Wide apron with 3" X-Y travel
  - 3.5" Wide alignment edge for irons & putters
  - 4" Radius Face angle gauge.
- Meehanite cast Steel frame
  - Machined and lapped guide ways.
  - Oven baked hard Enamel coating.

▲ Sliding Apron with built in +5/-5 degree face angle gauge, and a 3" face alignment edge is all that's needed to setup heads correctly prior to measuring lie, loft etc.

▲ The geared lie angle protractor provides smooth and precise controls matched to the Vernier style lie angle scale, having a resolution of 1/10 of a degree.

▲ The loft angle is measured using a protractor at 1/2 face height on drivers and across the club face on irons and putters.

**The Green Gauge!**
