

010142 Hosel Mandrel Kit (.335, .350, .370, .395 and .410)

These precision machined mandrels are great for accurately mounting un-shafted clubheads on measuring gauges. A must-have kit when measuring hosel offset and face progression, these mandrels eliminate shaft taper from interfering with measurements. The accurate fit also prevents the head from shifting when measured.

5 of the most common tip sizes are included in the kit: .335, .350, .370, .395 and .410

▲ Hosel bore fit

▲ Draw center bit
