

Apprentice Spec Gauge

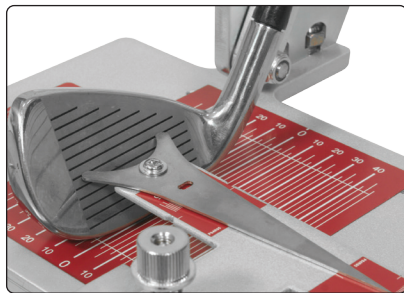

The Apprentice spec gauge is based on the clubmaker's spec gauge and was developed as a training aid to equip students taking golf management and club-making courses as part of their curriculum.

The apprentice spec gauge offers the same level of accuracy as the clubmaker's design but does away with the shaft slider and the adjustment on the face height apron.

The "Apprentice" spec gauge is a good tool to have for educators and students alike and is robust enough to stand the rigours of the classroom.

Key features:

- Measures lie, loft, face angle
- Measures face progression.
- Measures hosel offset.
- Measures leading edge height.
- Loft angle Protractor included.

▲ Face angle and leading edge alignment apron improves lie measurement accuracy

▲ Lie angle scale offers good resolution and can be easily controlled when setting up.
