

Exact length Shaft tipping ruler

Designed by clubmakers for clubmakers, this time proven design is the ideal shaft tipping ruler, as it accounts for the final playing length to which the club is to be built. By factoring in the lie angle and shaft insertion depth, pre-assembled clubs can be butt trimmed to within 1/16 of an inch.

The Exact Length ruler also lends itself the ability to measure the lie and loft of assembled clubs

▲ Measures the Exact playing length of pre-assembled as well as assembled clubs accounting for lie.

▲ Lie angle plate can also be used as a reference for measuring lie & loft of assembled clubs.
