

All purpose Bending Bar

An *all purpose* adjustable bending bar engineered for strength and tractability. This bending bar works with most irons. We kept the head as narrow and as thin as possible so that it can sit low on the hosel when bending upright lies.

This bending bar has slanted brass jaws and bevelled entry for added clearance.

The bar handle is of a two piece welded construction. This is a good balance between strength, lightness and rigidity. This bending bar is 24 inches long and can handle investment cast 410 and 431 Stainless steel.
