

### Double Ended Putter Bending Bar

A double ended, compact and highly tractable bending bar that is well suited for modern CNC milled putters.

The machined ends are sized for both short and long hosels and are fitted with tough, non-marring nylon inserts that can be adjusted width-wise to create a tight fit around the hosel.

A tighter fit is more conducive to producing a bend that start at the root of the hosel instead of above it.

**Please note:**  
Nylon inserts can be easily customized by filing away excess material to fit snugly over the hosel to be bent. This requires the purchase of additional inserts
