

Putter Hosel Bending Bar

We've devised this compact and gentle bending bar to work on putters with short bendable hosels. The sheave are spaced 30 mm (1.1/4") which is more than enough to cantilever the hosel at the base and top. This arrangement produces a straight bend with all the tensile stresses placed on the base of the hosel where it is strongest.

The Disposable hosel conforming Nylon sheaves are soft and won't dent or scratch the delicate surface finish found on today's premium putters.
