

170800 Ratchet Vice Clamp

A handy ratchet vice clamp which automatically adjusts to any size shaft and pressure level thanks to a "Jam Cam" machined from Heat treated High Speed Steel to minimize wear and tear from repeated clamping action.

Key Features:

- Jam Cam design is ideal for handling clubs, gripping, trimming etc.
- Works with any diameter shaft tip or butt without adjustment
- Non-marring, non-slip soft rubber jaws with "Power rib" reinforcement
- Can be bolted down to a work bench, gripping stand or held in a vice.
- Can be mounted vertically or horizontally. Mounting bolts included.

Special Note!

75 mm clamp length is all a clubmaker will ever need to clamp a golf shaft without slippage. This is achieved by taking into account a shaft's rate of taper and the radial pressure developed by the cam. "Copy cat" designs featuring longer jaws are not as stiff and thus do not offer any advantage over our design as the force is spread over a larger area, thus reducing its effectiveness!

Transformer Universal Portable gripping stand

We've long recognized that clubs can be gripped every which way a clubmaker desires and with the tools he has. This usually a matter of personal preference, level of experience and surrounding settings...

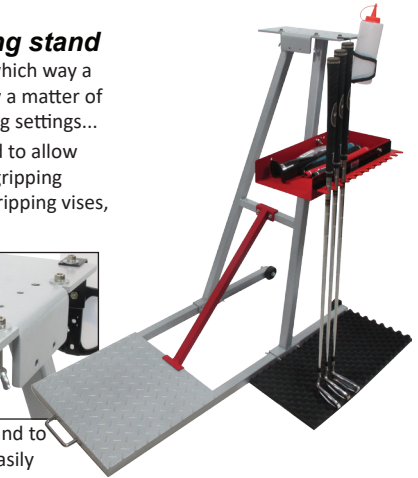

We've created the "Transformer" portable gripping stand to allow clubmakers of all skill levels to build their own "dream" gripping station using our large selection of *compatible bolt-on* gripping vises, tools and accessories.

▲ Universal mounting plate adapts to all of our 100xxx and 110xxx gripping tools

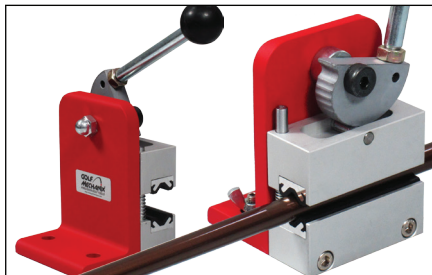

▲ Roll it anywhere stand to where the action is. Easily moved out of the way

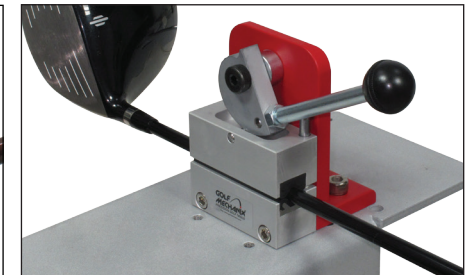

▲ Replacement pads Split halves 75 mm long

▲ Horizontal installation using a bench vise

▲ Ratchet provides a reliable fuss free convenience.

▲ Vertical installation on top of gripping stand.
