

# HIGH-DENSITY TUNGSTEN POWDER

High-density tungsten powder comes in handy for making swing weight adjustments internally and is a superior powder for packing maximum weight in minimum space. This high-quality powder flows as smoothly as the sands of an hourglass! It is easy to pour down grip chutes, hosel weight ports etc... Pour it, pack it, or mix it with epoxy glue and rattle stopper to increase swing weight.

### Specifications:

- 35% heavier than lead.
- Clump-free powder. Will not cake or oxidize!
- Does not leave smears or residue as lead powders do.
- Non-toxic.

### Precautions:

Avoid eye contact. If powder enters the eyes, hold eyelids open and flush eyes under gentle running water for a minimum of 15 minutes.

- Do not inhale.
- Do not disperse.
- Wash hands after use.
- Prolonged skin contact may cause skin irritation for some people.

Contains approximately 1/4Lb equivalent to 4oz or 113 grams net weight.
