

220520-GT *Flexible Tungsten Rubber tip weights*

Significantly heavier than lead, these tungsten tip weights pack a mighty weight into a compact footprint. Available in 2 sizes, they are colour coded by weight and are instantly recognizable for convenience.

The resilient composition allows the weights to flex with the shaft tip while reducing the potential for rattle or shaft tip breakage.

These tip weights are designed for graphite wood shafts with a tip ID of 3.5 mm or more.
