

290100 Universal Shaft Extender

The Universal Shaft Extender is suitable for steel and graphite shafts with an internal diameter in the range of 0.475 - 0.585 inches.

The extender is made of a carbon composite plastic stronger than steel. This extender is conveniently marked at 0.5 inch intervals.

The rings act as a saw blade guide and allow for a clean square cut to be made.

The universal shaft extender is a time and cost saver on rush jobs as the extender is bound to fit most shafts.

- One size fits all, reduces the need to keep assorted extenders in stock.
- Saves time and hassle finding the extender that fits!

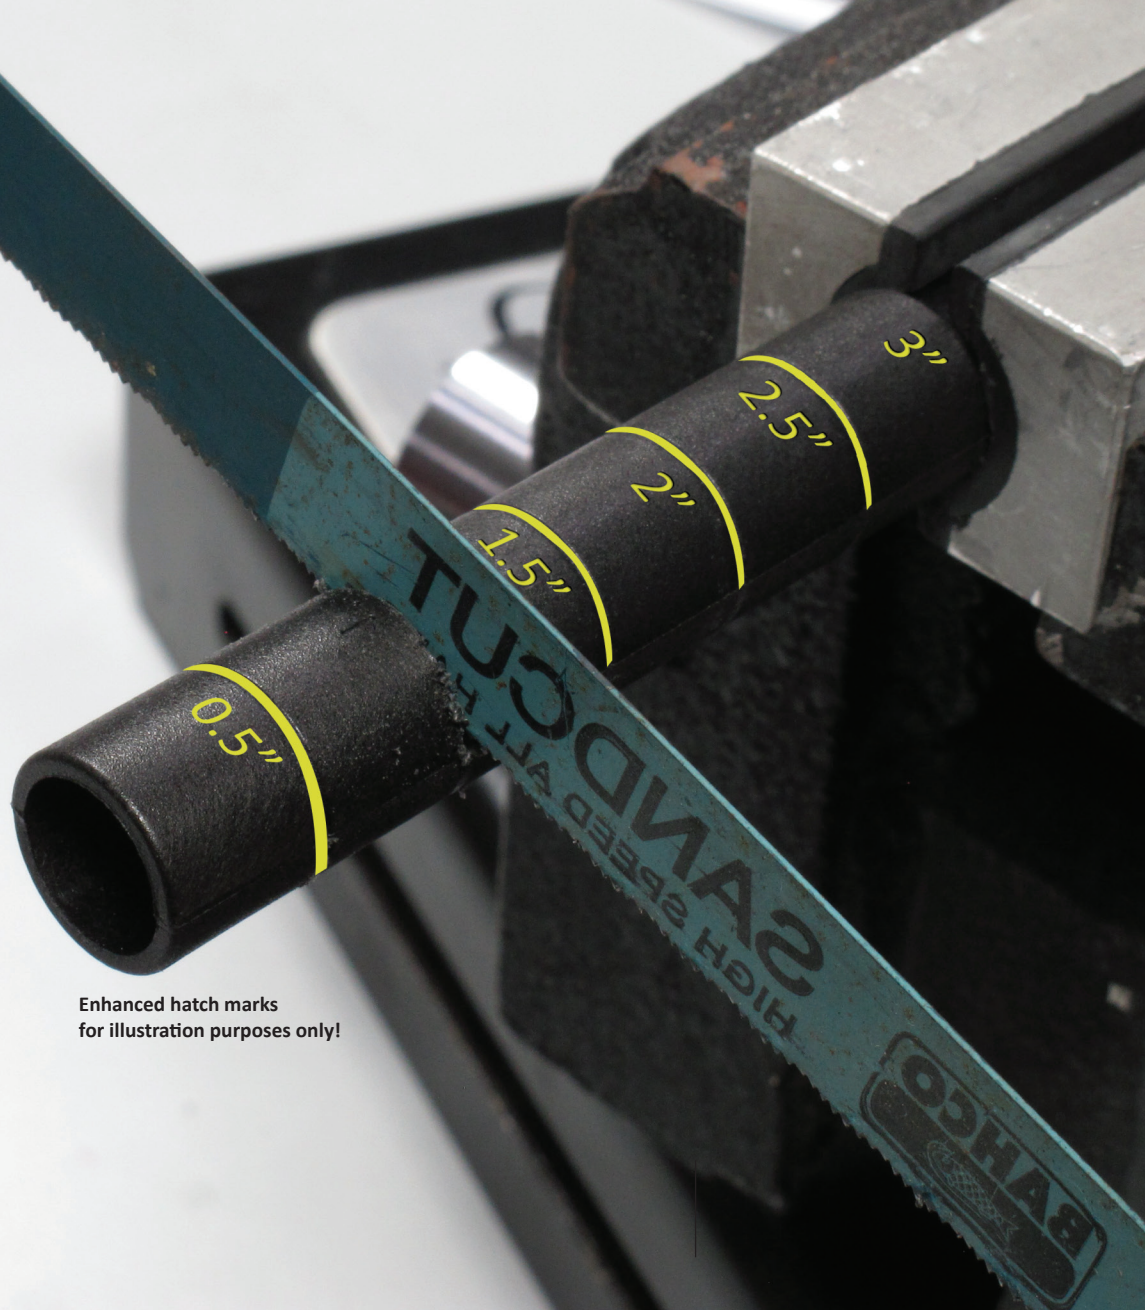

▲ Grooves retain epoxy to ensure good wetting and a strong bond

▲ Stress relieved joint prevent breakage

▲ Dowel locks the extender in place and ensures a snug secure fit while the epoxy sets.
