

Aluminum Shaft Extender for Steel Shafts

The Golfmechanix Aluminum Shaft Extenders are a major improvement over the double ended extenders commonly found in the trade!

Weighing under 11 grams, our 3" long (75 mm) extenders, are made lighter & straighter and feature an improved insertion bit 3/4" long (35 mm) which requires very little adjustment for a tight and secure fit with steel shafts. The mildly stepped butt joint offers a smooth transition, which minimizes the use of build-up tape under the grip.

Note: Extending a club more than 2 inches may compromise shaft integrity and increase the risk of breakage.
